
RegionAdapterMoETCN: sequence-only region-adapter mixture of experts
(a) Residue features
(b) Warm-start backbone
(c) Region-adapter MoE
(d) Calibration and output
Protein sequence
Frozen ESM2-t33 residue embedding
Amino-acid one-hot
Relative position
P4.6 RegionAwareTCN checkpoint
Frozen shared TCN blocks
SDR adapter + expert head
LDR adapter + expert head
Terminal-IDR adapter + expert head
Internal-IDR adapter + expert head
Residue-level softmax gate
3-seed score averaging
Expert mixture logit
Generic disorder logit
Platt calibration DM1229 only
Calibrated IDR probability + entropy uncertainty
No PSSM, MSA, PDB coordinates, or AlphaFold inputs
Only adapters, expert heads, and gate are trained
Gate weights are analyzed as auxiliary mechanism evidence
